

One little piece of technology...

GE Money
Simplifying money matters

...a lot more peace of mind.

Extra security and chip technology is on your card.

To better protect your GE Money Low Rate MasterCard®, we've added new security measures and market leading technologies. A chip is now built into your card which provides increased protection against fraud. Plus, if your card is lost or stolen, the chance of your personal details being copied is reduced.

Enjoy greater confidence with your own PIN.

A PIN helps to protect you against unauthorised transactions. You can now select your own PIN, making it easier for you to remember, for greater convenience, security and availability. A PIN is also important when travelling overseas, for accessing your account in more countries. Call 1300 721 394 to make your selection today.

Online or offline, you're protected.

Our outstanding online security ensures your account details are better protected. For example, every time you log in to the Online Service Centre, our system checks for any unauthorised access to your account. To find out more visit gemoney.com.au.

Falcon™ is always looking out for you.

We use the Falcon™ fraud management system to further protect your card. Falcon™ identifies unusual activity on your card. It examines transactions in 'real time', flagging unusual transactions to our card security experts for review.

Call to activate your card.
